

WHO PROJECT SUMMARY (FUNDED BY DFID THROUGH WHO)

The Uganda Malaria Surveillance Project (UMSP) is running an Outpatient Surveillance Program at 21 level III/IV health facilities 'Malaria Reference Centres (MRCs)' located in 21 districts across the country. Data is collected using the Ministry of Health's HMIS Form 031 (Outpatient registers) as part of strengthening HMIS. Data is then entered into a Microsoft Access electronic database at the sites and sent to the UMSP core office in Kampala. Data analysis is performed using STATA and generation of weekly and monthly surveillance reports is done. Findings of the report are disseminated on a monthly basis during the WHO Surveillance, Monitoring, Evaluation, and Operations Research Technical Working Group (SMEOR-TWG) meeting that include the National Malaria Control Program (NMCP), WHO and other stakeholders. Our reports are also shared with the District Health Management Teams of the respective districts, and the health facility In-charges of each MRC on a monthly basis for dissemination to the health workers at MRCs and in effect contribute to evidence-based decision-making such as improvement in case management of malaria. This project is being funded by DFID through WHO until May 2017.
